PHONES: 241 - 242

A Million users — the

What door shall I put in my garage?

This is a question that should have an answer in which the *facts* in the case are literally true.

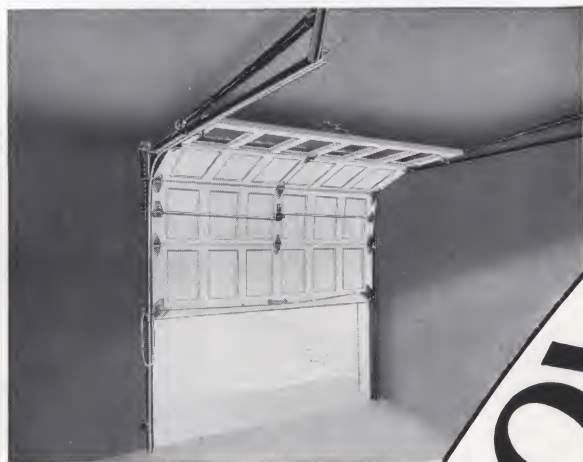

- The door must operate easily
- The door must last for years
- The door must be absolutely tight
- The door must be attractive
- Service must be available if required.

The simple way in which the rearwardly inclined tracks are fastened to the jambs and the frictionless manner in which the ball-bearing rollers are held by hinges of graded heights, eliminates all possible chance of friction in door operation. This same simple device assures a tight-fitting door at top, bottom and sides. This point in door construction should not be overlooked for long and lasting door operation.

The "OVERHEAD DOOR" is a complete unit delivered on the job. It is installed by a National Service Organization that renders continued service, insuring the user of life-long satisfaction.

Attractive Doors in a Modern Home

The "OVERHEAD DOOR" when open requires no valuable space. It is inside, out of the weather. It cannot blow open or blow shut. The door is tight when closed. It opens easily.

The "OVERHEAD DOOR"

IT IS A REAL PLEASURE to stop at a Key Switch and from your car seat open the door. The door, out, are instantly turned on. The door is closed by a button in the garage or home.

An Electric Control is as handy as the
